Specialty Crops For Pacific Islands

Synopsis

From bamboo to black pepper, cacao to coconut and tea to taro •Specialty Crops for Pacific Islands provides detailed cultivation, value-added, and marketing information for 27 of the most important specialty crops for Pacific Islands and other tropical locations. Specialty crops provide a rapidly growing economic opportunity for innovative farmers and gardeners who are interested in diversifying their products. The book provides insights into sustainable cultivation and processing techniques for local and export markets with an emphasis on innovating production methods, postharvest processing, and marketing. Beautifully illustrated with over 940 color images, each chapter covers a crop in detail. Specialty Crops for Pacific Islands highlights producers from throughout the Pacific and shares their experience •both their challenges and successes. From the publishers of Traditional Trees for Pacific Islands and Agroforestry Guides for Pacific Islands, this 576-page book promotes high-quality food, fiber, and healthcare crops grown in diverse agroforestry systems. The emphasis is on providing small farms with opportunities for local consumption and commercial sale. Specialty Crops for Pacific Islands is a must-have reference book for farmers, gardeners, teachers, and extension agents in the Pacific and throughout the tropics who are interested in new economic opportunities from specialty crops. This is not a book that sits on the shelf, but is thumbed through again and again.

Customer Reviews

It is a very thick book that includes lots of color photographs, which are worth the money, but the book is of limited use if you are outside of the tropics. Many of these fruit trees will not fruit outside

of the tropics, for instance, mango steen, cacao, breadfruit will not fruit in south Florida; except in Key West (without a greenhouse). The crops include: Bamboo, Banana, Black pepper, Breadfruit, Cacao, Chili pepper, Coconut, Coffee, Giant swamp taro, Giant taro, Ginger, Honey bees, Kava, Koa, Lychee, Macadamia nut, mangosteen, moringa, pumpkin and squash, sandalwood, sweetpotato, tamanu, tannia, taro, tea, and vanilla. Different authors wrote different sections of the book.

Craig Elevich has once again given us a tremendous tool for tropical agroforestry and permaculture. This manual reviews marketable products for both sunny areas and, importantly, products that can be raised in the shade of productive trees. If you are serious about regenerative enterprise in tropical climates this book is a must have. It offers incredible details on production, marketing, processing, and budgeting for a range of crops from moringa to black pepper to honeybees.

Excellent overview to many crops. Very useful information.

Very thorough explanations giving the reader much to ponder if they're planning to grow any of these crops.

Another very useful book
