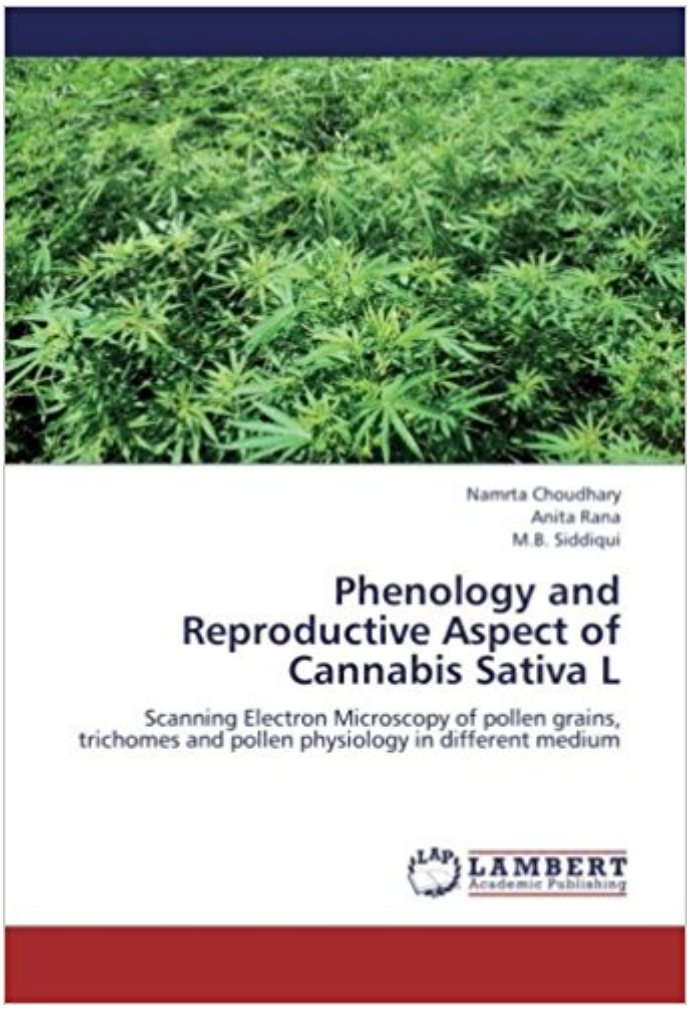
Phenology And Reproductive Aspect Of Cannabis Sativa L: Scanning Electron Microscopy Of Pollen Grains, Trichomes And Pollen Physiology In Different Medium



Synopsis

Phenological studies permit to construct a calendar for the growth activity of the plants, especially, the period of initiation of new leaf buds, appearance of mature leaves, flower bud initiation, and formation of mature flowers, fruiting and seed maturity. Reproductive biology studies thus have to be a vital feature of all conservation projects. Information of the these aspects in Cannabis sativa is required not only for a comprehensive understanding as the efficiency of the breeding system of a species and its evolutionary success but also for effective optimization of yield conservation and rational genetic improvement.

Book Information

Paperback: 116 pages
Publisher: LAP LAMBERT Academic Publishing (February 5, 2013)
Language: English
ISBN-10: 3659126071
ISBN-13: 978-3659126079
Product Dimensions: 5.9 x 0.3 x 8.7 inches
Shipping Weight: 7.8 ounces (View shipping rates and policies)
