# Dynamic Customization: Release Type, Axis Stability, And Optimum Pin Carry

## Synopsis

When the two-piece bowling balls came on the market, shop professionals placed their internal imbalances in a myriad of positions, relative to the grip, causing erratic pocket pin carry and/or causing the ball tracks to run over the grip holes. Believing that the goal of serious bowlers should be consistency of roll and optimal deflection, leading to enhanced pocket pin carry, Bob Strickland refined a layout system that benefits bowlers using various types of release. He calls his system Dynamic Customization, because, rather than fitting internal imbalances to particular lane dressing patterns, it fits internal imbalances to release type; dynamics are customized to the way the bowler delivers the ball. The method of achieving axis stability and optimal pin carry is different from most of the drilling instructions included with new bowling balls. Its purpose is to maximize pin carry on solid pocket hits for an individual's release type without regard to making the ball's visible reaction take on any particular shape. The procedures described in Dynamic Customization are easy to master and minimize confusion, allowing bowlers to turn their attention to refining their forms, sharpening their ability to hit targets, and building confidence.

## Book Information

Paperback: 106 pages

Publisher: Robert H. Strickland Associates (July 1, 2011)

Language: English

ISBN-10: 0963591924

ISBN-13: 978-0963591920

Product Dimensions: 5.5 x 0.2 x 8.5 inches

Shipping Weight: 6.7 ounces (View shipping rates and policies)

Average Customer Review: 4.0 out of 5 stars See all reviews (5 customer reviews)

Best Sellers Rank: #1,149,510 in Books (See Top 100 in Books) #47 in Books > Sports & Outdoors > Individual Sports > Bowling

## Customer Reviews

It is a good argument for different tracks benefiting from certain drillings. I just wonder if they truly are better for specific track players. And I wonder if the fact that my 1960 hard rubber spare ball that tracks one inch from the fingers and thumb make me a high track player. All my reactive balls track 3 inches from the fingers and 1 inch from the thumb.

I read Perceptive Bowling when I was just learning about fitting and drilling bowling balls over 30

years ago, it gave me a different way of looking at the hand etc. This book gives me a different perspective on the layout of the ball for different bowlers. Definitely worth a read.

This book is a great help to Pro Shop Owners that want to keep up on the latest effects of new technical equipment.

It's an interesting read and reveals valuable insight into how and why balls are drilled.

I have a pretty good concept of bowling & bowling ball but this book was a little extreme for me. Maybe someone opening a pro shop could use a book like this!!
